

DISTANCE LEARNING BEST PRACTICES

Online instruction is about transforming your existing instruction, not starting from scratch

From Texting to Typing

Now that learning must happen through desktop screens, students need to know how to use more than their thumbs to type and communicate.

Guide them to touch typing proficiency with Typing.com's scope and sequence curriculum.

Provide Structure

Schools deliver structure through proximity but now that students are online, find ways to deliver (and monitor) assignments, tests, and attendance.

Effortlessly keep tabs on each and every student with Typing.com's realtime tracker, timed tests, and time-activated classroom and assignment access.

Track Progress

Use ed-tech to sync student work as they progress through your curriculum will help you maintain standards and manage achievement.

All your important information and student progress syncs automatically with Typing.com, is managed at the administrative level, and is absolutely free.

Maintain Motivation

Without the natural supports that exist in a physical classroom, students may struggle to independently stay on top of their work.

Tools that employ gamification techniques keep kids on task because it feels more like 'play' than work—with less effort (and oversight) from you.

Effective Communication

Many educators turn to long emails or instruction documents to communicate long or complex assignments that are hard for students to follow.

Use short, video explanations to support written class materials. Every Typing.com lesson provides video demonstration to engage students in instruction.

Manage Curriculum

Having everyone on the same page means keeping work consistent across students or classrooms, creating standards, and setting clear goals.

Finding an edtech solution that seamlessly syncs work across students, classrooms, and teachers is key. See if Typing.com syncs with your SIS or LMS here.

WHAT ARE YOU WAITING FOR?

TYPING.COM IS THE PERFECT DISTANCE LEARNING TOOL.
